

Rx For a Healthy Heart

Barry W. Ramo, MD
New Heart Fitness and Health

RX for a Healthy Heart

- Assessment of cardiovascular risk
- Cardiac rehabilitation: a model for heart disease prevention
- Inflammation role in atherosclerotic coronary Disease
- Risk Stratification guides management
- Interventions to manage risk factors

80% of Second Heart Attacks are Preventable with Lifestyle

- Quit smoking
- Eat a healthy diet
- Get regular physical activity
- Modify risk factors
- Take medications to control your cholesterol and blood pressure
- Reduce Stress

Dose Response Relationship for CR Sessions and Risk of Death / MI *

Sessions Attended	36 vs 24 Sessions	36 vs 12 Sessions	36 vs 1 Sessions
Death	- 14%	- 22%	- 47%
Myocardial Infarction	- 12%	- 23%	- 31%

Nutrition and weight management

New Heart New You

*A Heart Disease
Prevention Program*

What are we trying to prevent?

Hs-CRP and IL-6 Risk for MI and Death

Impact of Elevated Inflammation on MI & Death Risk (Normal Cholesterol)

Acute Coronary Syndrome

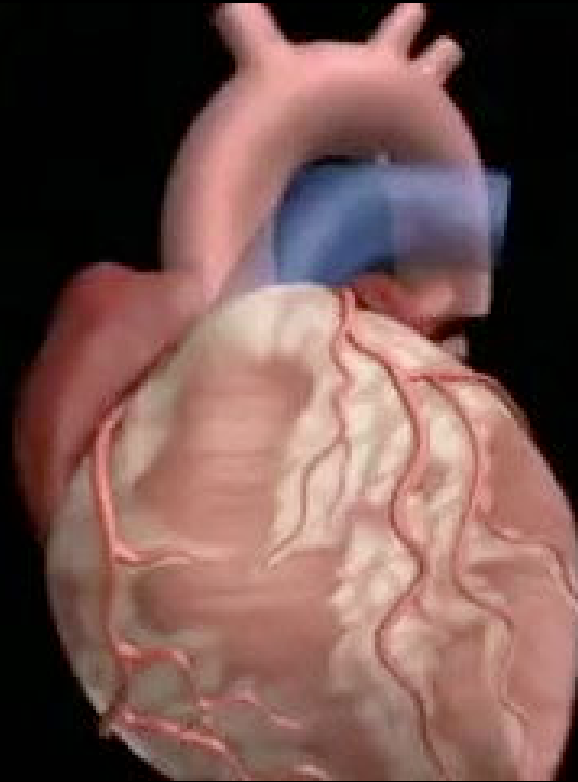

Stable Angina

Inflammation differentiates stable from unstable Angina

**Vulnerable
Plaque**

Which lesion is most likely to cause an acute myocardial infarction

ROSPECT trial (Stone GW, et al., New England Journal of Medicine, 2011) found that the culprit lesions leading to myocardial infarction were often in vessels that had less severe narrowing (<70%) at baseline.

Which lesion is most likely to cause an acute myocardial infarction

Moderate Coronary Artery Disease
Typically 40-70% blockage

ROSPECT trial (Stone GW, et al., New England Journal of Medicine, 2011) found that the culprit lesions leading to myocardial infarction were often in vessels that had less severe narrowing (<70%) at baseline.

Asymptomatic Coronary Artery Disease

Less Testing and more Prevention

Coronary Artery PCI
does not save lives in
asymptomatic
patients.

Trials: Ischemia
(2020), Courage(2010
)

Routine Stress
testing in not
indicated for most
individuals
High risk

Risk Factors for Coronary Artery Disease

Modifiable Risk Factors

- Cigarette Smoking
- Hypertension
- Hyperlipidemia
- Sedentary Lifestyle
- Obesity
- Diabetes

Advanced Risk Assessment Markers

- Coronary Calcium Score
- Carotid Doppler Intima-Media Thickness
- C-Reactive Protein (CRP)

Non-Modifiable Risk Factors

- Family History
- Age
- Gender

Profile: Ann

63-year-old white female Accountant

History

No Cardiac history. Post menopausal,
Hypertension: No RX,
Sedentary

Exam and Labs

5'3 166 lbs Waist 37»
BP 135/85 BMI 31 kg/m²

Assessments

CRP 4.0
A1C 5.7%

TG 220 mg/dL
HDL-C 35 mg/dL
LDL-C 120 mg/dL

CT Coronary Artery Calcium Score

Score 0 10 yr. Risk 5.1%

Left Main

Score 35 10 yr. risk 11%

Take-Home Messages

- CAC score is a powerful tool for cardiovascular risk stratification
- High CAC scores warrant aggressive lipid-lowering therapy
- CAC = 0 can help avoid unnecessary medication in select patients
- Use CAC scoring in intermediate-risk individuals for better clinical decisions

Lipid Management for Primary Prevention

LDL 70-189 mg/dL

- Low risk (<5%): Lifestyle changes only
- Intermediate risk (7.5-19.9%*): Moderate-intensity statin
- High risk ($\geq 20\%$): High-intensity statin, aiming LDL <70 mg/dL

Lower LDL Less Plaque

?Does that translate to outcomes?

Lower LDL Cholesterol to Reverse Disease

Before

3 years
Later

Moderate vs. High-Intensity Statins

- ****Moderate-Intensity Statins (LDL ↓30-49%)****
 - - Atorvastatin 10-20 mg
 - - Rosuvastatin 5-10 mg
 - - Simvastatin 20-40 mg

- ****High-Intensity Statins (LDL ↓≥50%)****
 - - Atorvastatin 40-80 mg
 - - Rosuvastatin 20-40 mg

Evaluation of Asymptomatic Coronary Artery Disease

Coronary Artery PCI
does not save lives in
asymptomatic
patients.

preventative
interventions

W

How to **PREVENT** it

Don't smoke

Adopt a heart-healthy eating plan

Manage stress

Exercise regularly

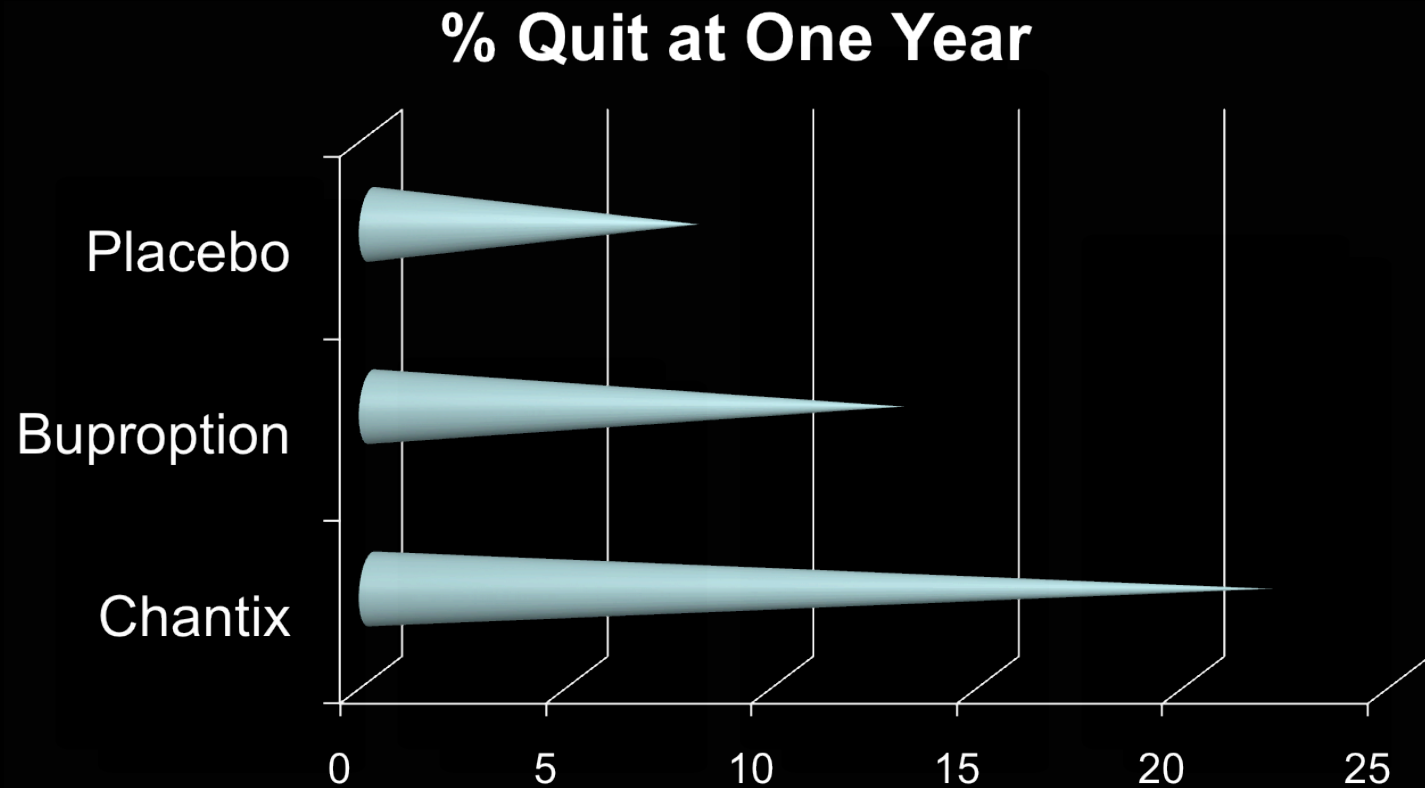

Know your numbers

Get to a healthy body weight

Drug Therapy and Smoking Cessation

Tobacco and electronic cigarettes

■ Research · February 24, 2018

Smoking E-Cigarettes Daily Doubles Risk of Heart Attacks

When Combined with Daily Cigarette Use, Heart Attack Risk Rises Five-Fold, Study
Finds

By Elizabeth Fernandez

Mediterranean Lifestyle Heart Disease Prevention

Key Scientific Evidence

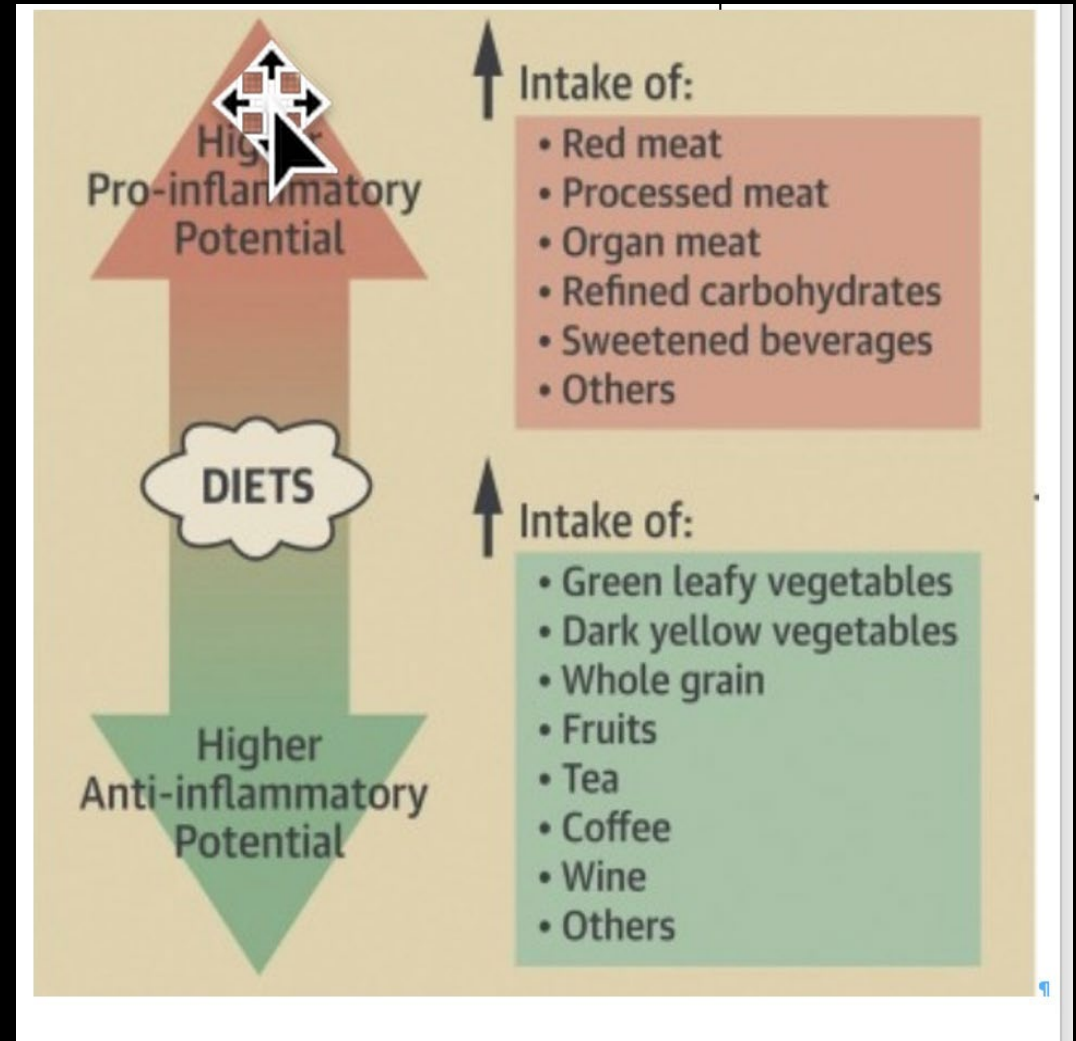

Cario vascular Benefits

- Reduces LDL cholesterol and triglycerides
- Reduces insulin resistance and fasting blood sugar
- Antihypertensive therapy
- Lowers blood pressure and inflammation .
- Associated with reduced cardiovascular
- - PREDIMED trial : 30% reduction in cardiovascular events.
- - Lyon Diet Heart Study : 70% reduction in recurrent heart attacks.

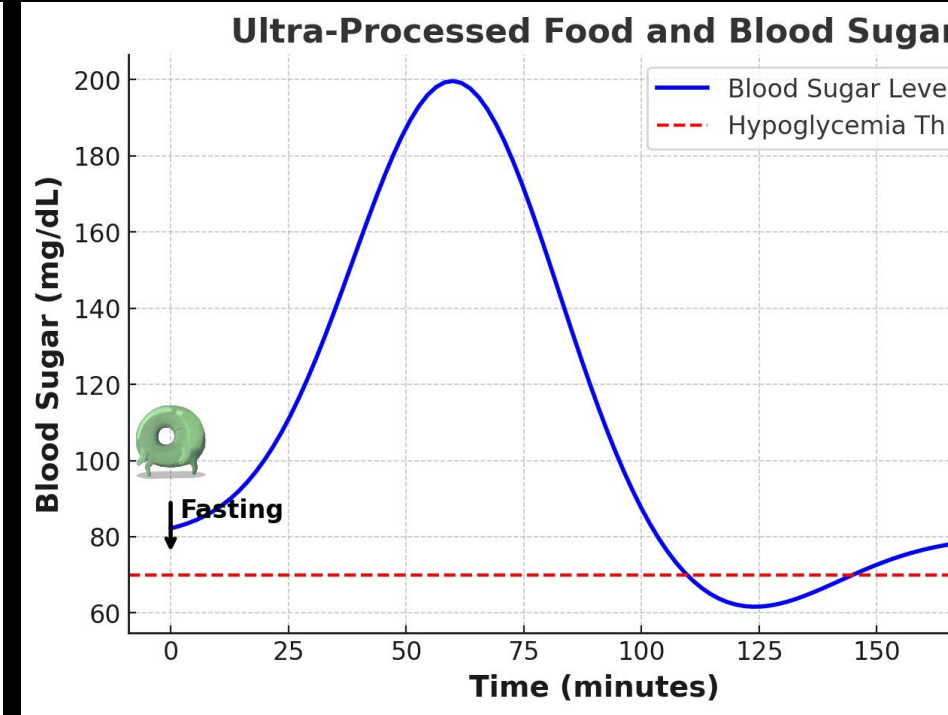

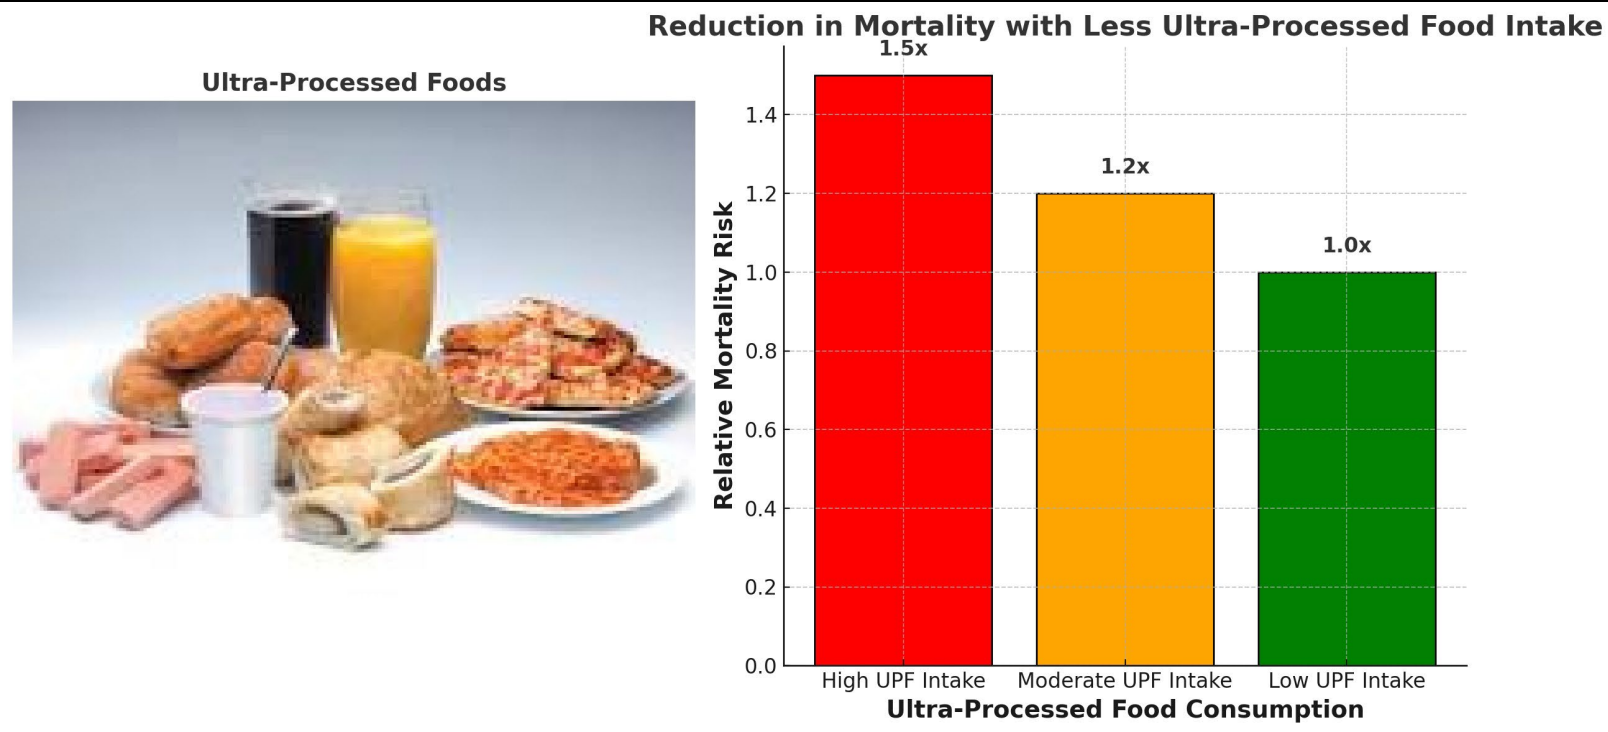

Mediterranean Lifestyle Elements

- Unrefined carbohydrates: fruits vegetables, whole grains cereals potatoes and beans.
- Fish: oily fish several times a week
- Low fat milk: and milk products
- Eggs: 3 to 5 per week
- Red Meat: several times a week lean cuts
- Nuts: nuts and seeds as snacks
- Olive oil: virgin olive oil

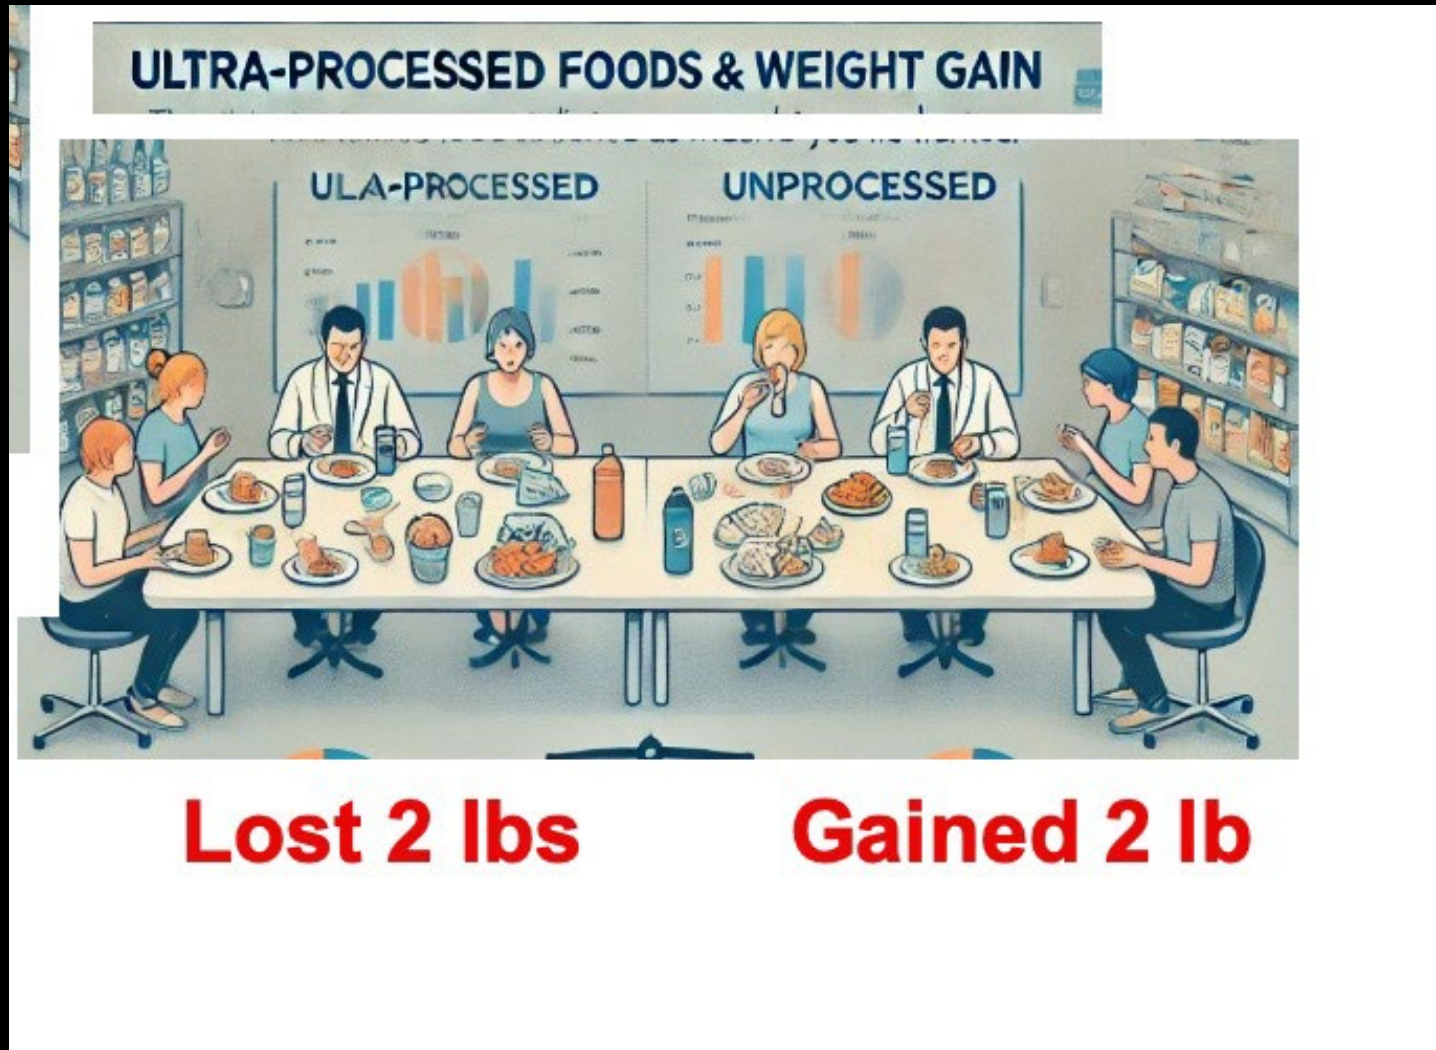

Cardiovascular risk and anti-inflammatory diet

Ultra processed food is poison for the heart

Ultra processed food and weight gain

Which Diet for You

Food Fight at ACC2002

Dr. Robert Atkins "The government has been pushing a low-fat, high-carbohydrate diet that is creating an epidemic of insulin resistance and hyperinsulinemia."

Dr. Dean Ornish: "I may be old fashioned,"
Ornish carped, "but I believe you should first have the scientific data, then write the book."

You said if I got a dog, i would enjoy exercising

SITTING
IS THE NEW SMOKING

Sitting is the New Smoking

Exercise

Reduction in Mortality Risk with More Exercise

No Exercise

Walk 20 Min Mile

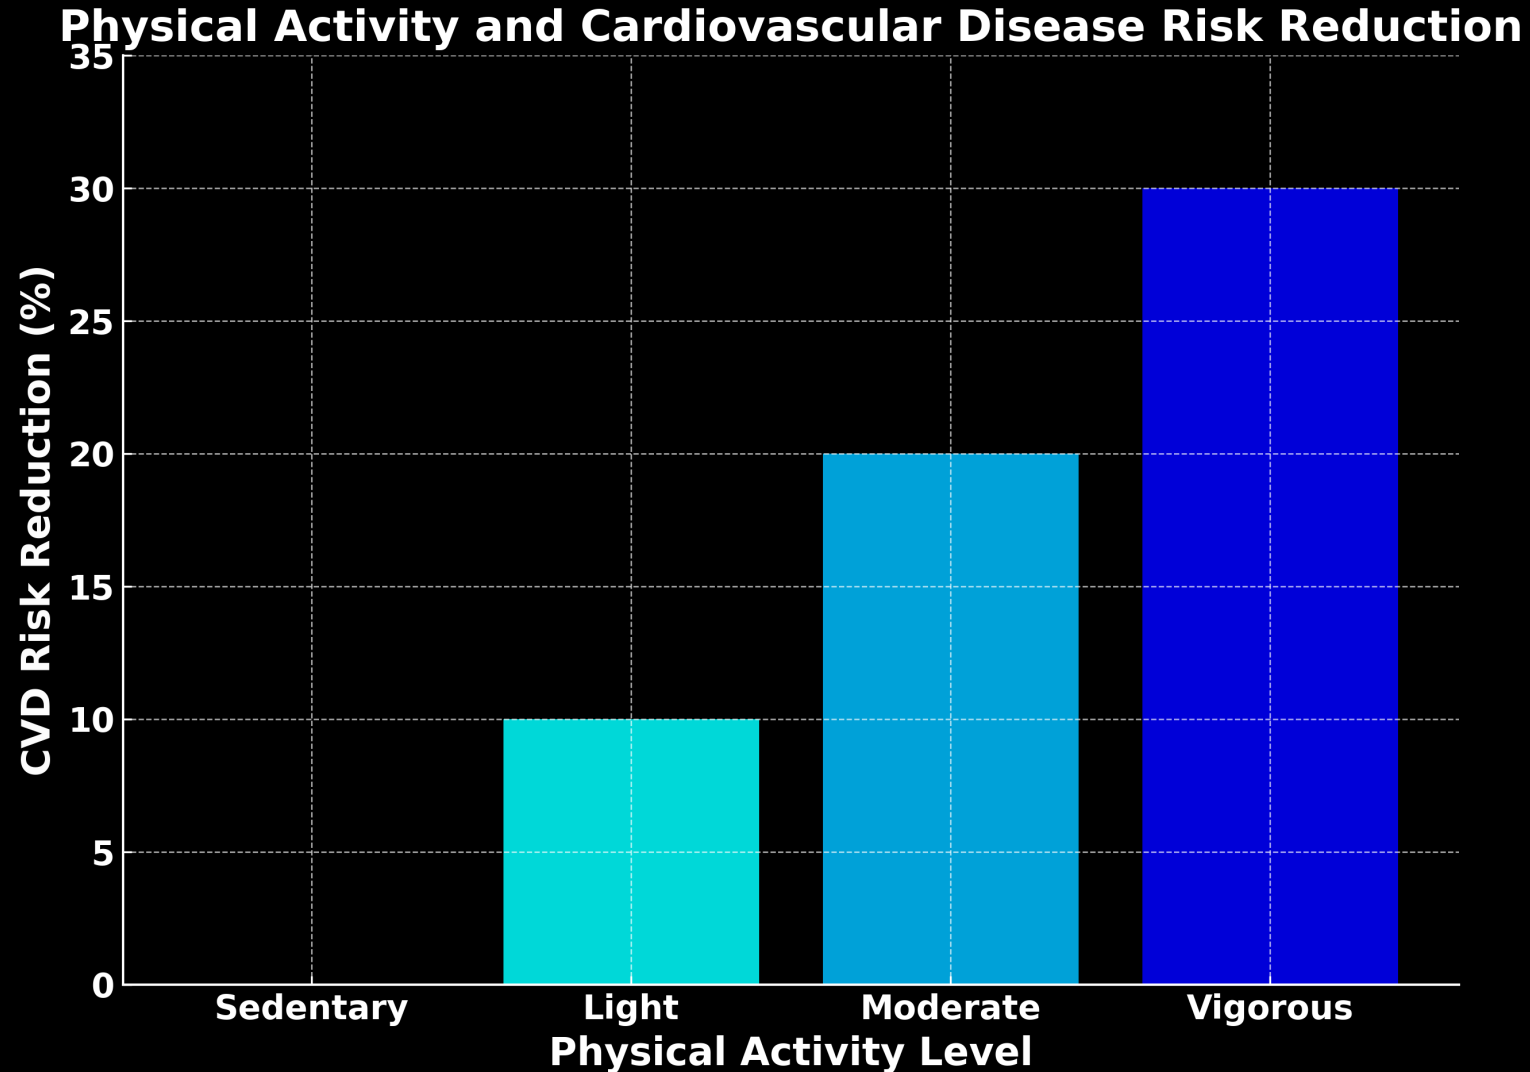

Run 10 Min Mile

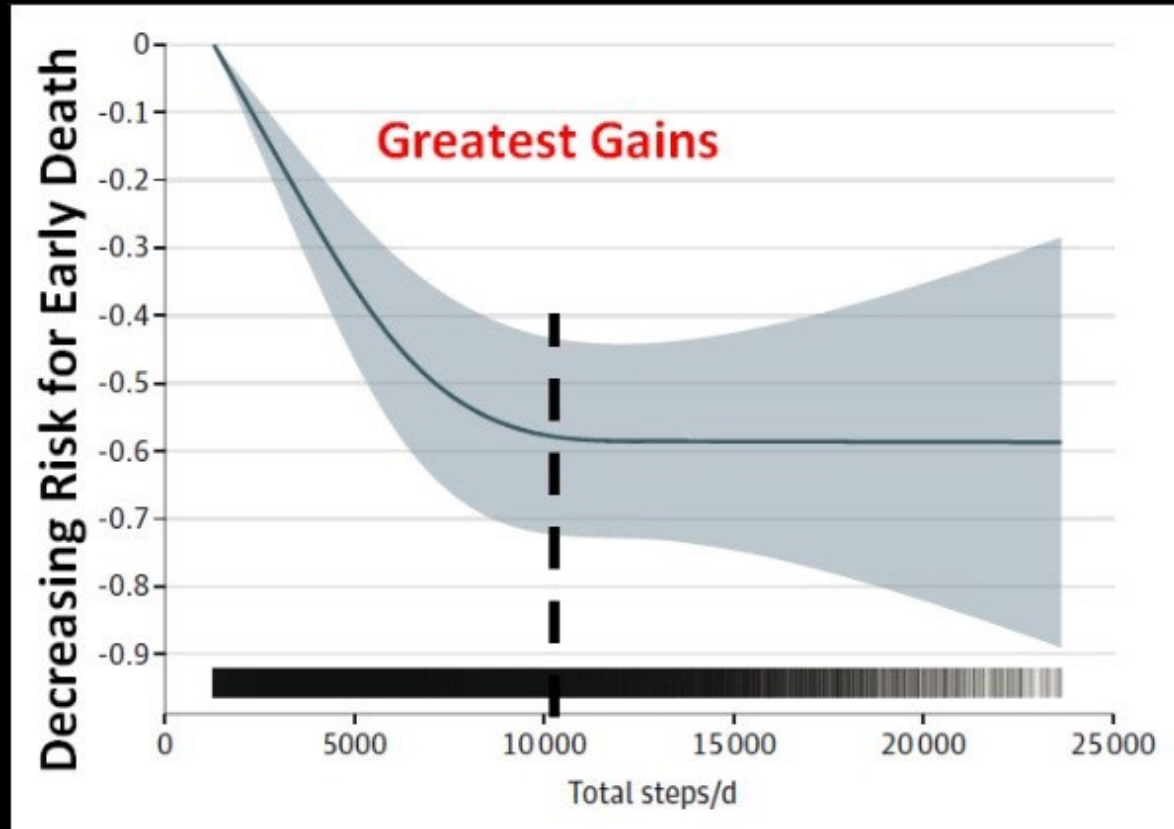

This infographic summarizes the findings as reported in the manuscript published by Arem, et.al. *JAMA Internal Medicine* 2015

@NCIEpiTraining

Physical Activity and Cardiovascular Disease Risk Reduction

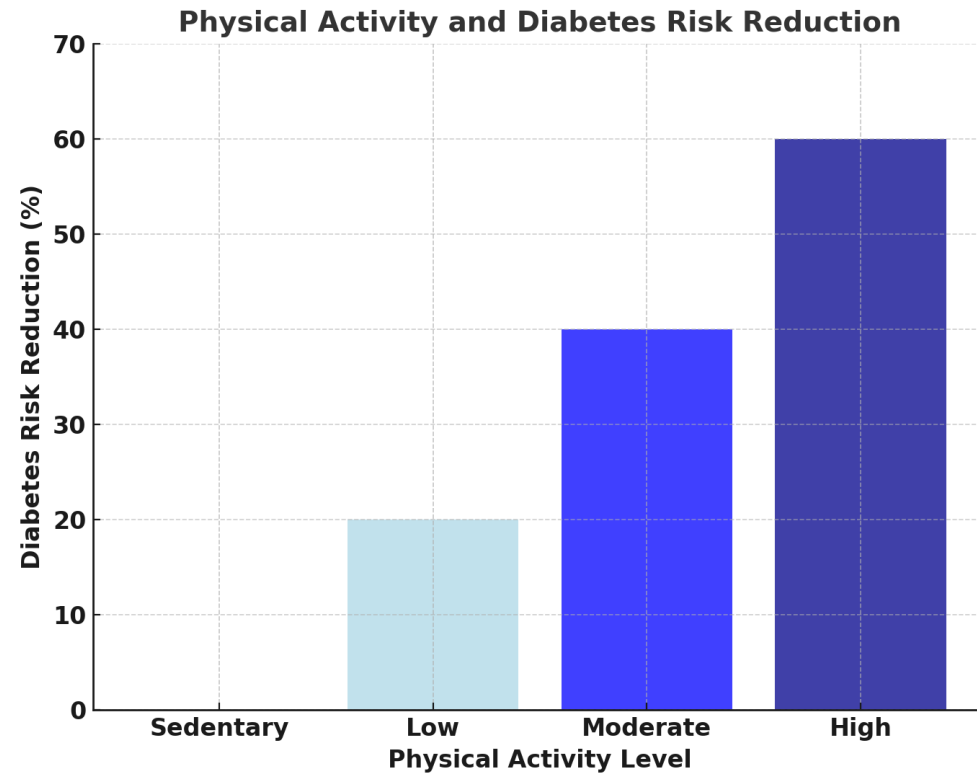

Step Count and Mortality.

Hs-CRP with exercise

Physical Activity and Diabetes Risk Reduction

Exercise Goals:

- Moderate-intensity aerobic 150 minutes/wk.
- Intense 75 minutes/week
- Strength, Balance, Tone 20 minutes twice a week.

1997-2001 National Health Interview Survey: Strength Training (ST) vs. All-cause Mortality in U.S. Adults ≥ 65 Years Old

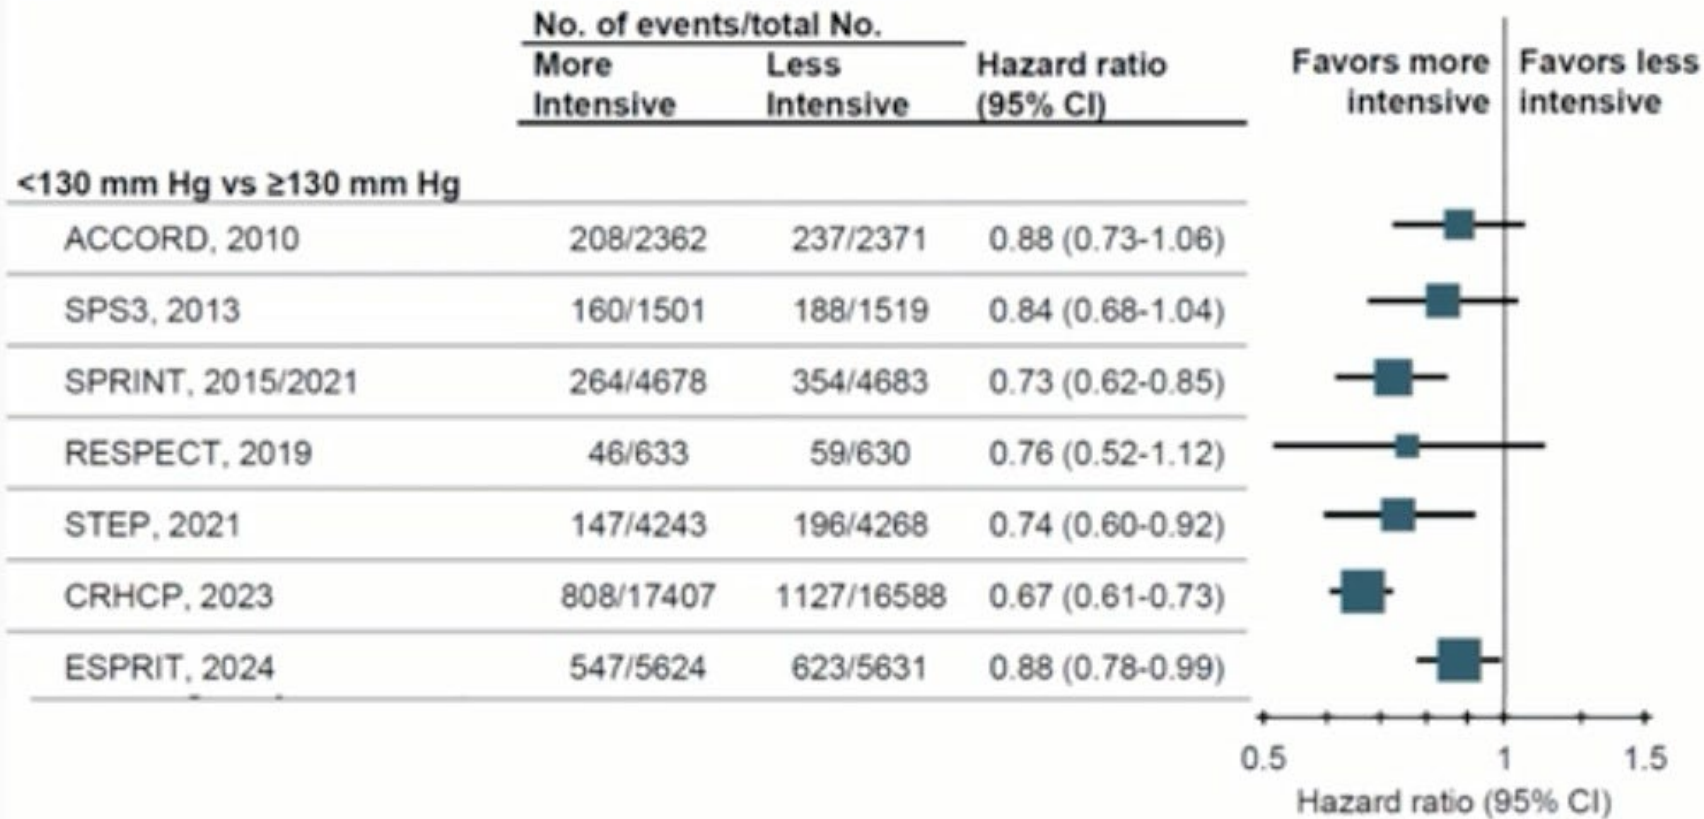

Guidelines for Prevention, Detection, Evaluation and Management of HBP in Adults 2017

BLOOD PRESSURE CATEGORY	SYSTOLIC mm Hg (upper number)		DIASTOLIC mm Hg (lower number)
NORMAL	LESS THAN 120	and	LESS THAN 80
ELEVATED	120 – 129	and	LESS THAN 80
HIGH BLOOD PRESSURE (HYPERTENSION) STAGE 1	130 – 139	or	80 – 89
HIGH BLOOD PRESSURE (HYPERTENSION) STAGE 2	140 OR HIGHER	or	90 OR HIGHER
HYPERTENSIVE CRISIS (consult your doctor immediately)	HIGHER THAN 180	and/or	HIGHER THAN 120

Aggressive BP lowering Not always effective in reducing CV risk

Major CVD Events

European Society of cardiology Hypertension Guidelines 2024

New 2024 ESC categories

-Non-elevated
<120/70 mmHg

Rx NO

-Elevated
120-139/70-89 mmHg

Risk Based RX

-Hypertension
≥140/90 mmHg

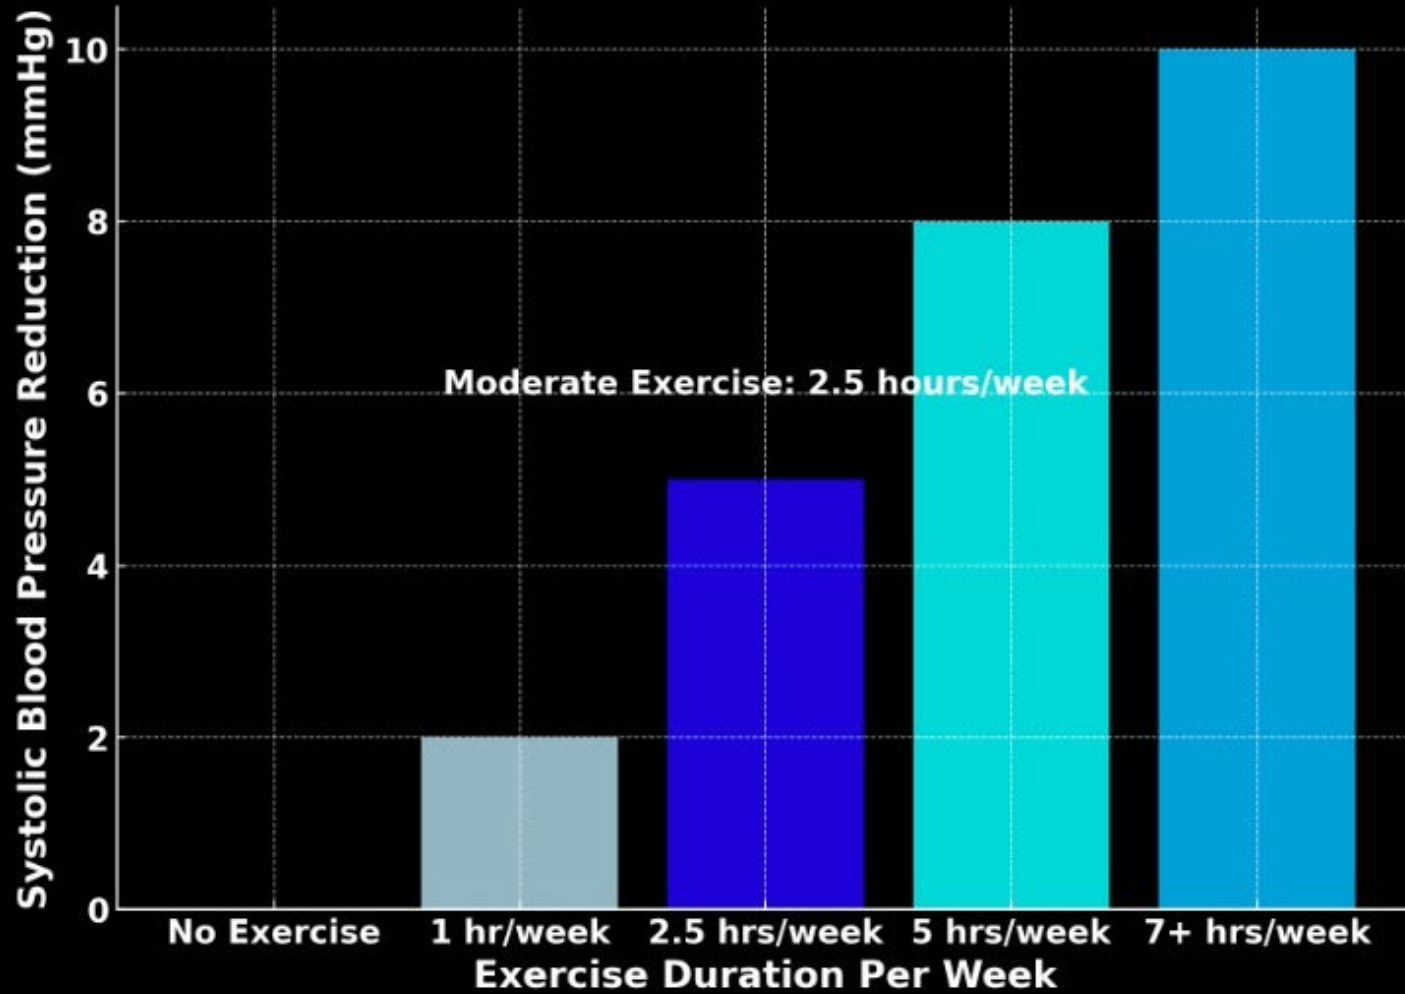

Rx Yes

Non-elevated blood pressure	Elevated blood pressure	Hypertension
Office BP SBP <120 mmHg and DBP <70 mmHg	Office BP SBP 120–139 mmHg or DBP 70–89 mmHg	Office BP SBP ≥140 mmHg or DBP ≥90 mmHg
Insufficient evidence confirming the efficacy and safety of BP pharmacological treatment	Risk stratify to identify individuals with high cardiovascular risk for BP pharmacological treatment	Cardiovascular risk is sufficiently high to merit BP pharmacological treatment initiation

Therapy for Blood Pressure Control

BP Level	10-year risk	Therapy	Class	Level
120/79-90	-	Lifestyle	I	B
120-139/79-90	<10%	Lifestyle	I	A
120-139/79-90	≥ 10%	3 months Lifestyle then Medication		
140/90	-	Lifestyle + Medication	I	A

Effects of Aerobic Exercise on Blood Pressure

Head and the Heart

Head and the Heart

- 3 to 4 times increased risk of death in first year following MI
- Psychosocial factors associated with CAD risk:
 - Type A personality
 - Hostility/Anger
 - Depression/Anxiety

Conclusions

- Cardiac Rehabilitation is a model for heart disease prevention
- 80% of heart attacks are related to lifestyle
- Risk assessment is critical in providing evidence-based care
- Nutrition and Exercise are the cornerstone of Rx for a healthy heart
- Successful Rx for a healthy heart requires psychological support
